

## ***Do you Want to Experience Less Downtime Filling the Abrasive Tank on your MicroBlaster™?***

## ***Do you Want to Improve your Productivity?***

Equip your MicroBlaster® with either the MB1456-3 five-inch tank extender or the MB1456-4 ten-inch tank extender. Both tank extenders increase the capacity of your powder tank, thereby reducing downtime for refilling.

The standard tank on a MicroBlaster® holds approximately 2 lbs. of aluminum oxide. With the five-inch tank extender installed on the MicroBlaster®, the tank capacity will double to 4 lbs. The MB1456-4 ten-inch tank extender increases the capacity of the abrasive tank to 6 lbs.

The MB1456-3 and MB1456-4 tank extenders are specifically designed for use with Comco MB1568 Acme thread style tank covers. Older MicroBlaster® models (serial numbers less than MB12100) may not be compatible with the tank extenders unless they have been upgraded to the new style tank cover.

Contact Comco Technical Support at 1-800-796-6626 for additional information and to order your tank extenders today.
